This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Depending on the disease course, quality of life is affected by different symptoms,
- For RRMS, gait and balance problems, and fatigue affect most quality of life,
- For progressive MS, spasticity and paralysis affect most quality of life,
- When measuring with a visual analogue scale, different symptoms gain importance.
