This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- This case shows the usefulness of leflunomide in the treatment of CLIPPERS syndrome
- The utility of azathioprine as a cost-effective option is reinforced
- Eventually after the suspension of the steroid-sparing treatment the patient recurred
- Steroid-sparing cost-effective therapies are a recommended option in CLIPPERS
