This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Teriflunomide, a safe and effective drug for RRMS, is a mild immunosuppressant
- The loss of periodontal host–microbe homeostasis causes caries and periodontitis
- Poor oral hygiene might contribute to dental pathology, mainly in advanced MS cases
- Whether teriflunomide might favour teeth loss in predisposed individuals is unclear
- Dental care prior to and during teriflunomide therapy is recommended
