Comparison of 3D cellular imaging techniques based on scanned electron probes: serial block face SEM vs. axial bright-field STEM tomography

E.L. McBride, A. Rao, G. Zhang, J.D. Hoyne, G.N. Calco, B.C. Kuo, Q. He, A.A. Prince, I.D. Pokrovskaya, B. Storrie, A.A. Sousa, M.A. Aronova, R.D. Leapman

PII: S1047-8477(18)30027-3
DOI: <https://doi.org/10.1016/j.jsb.2018.01.012>
Reference: YJSBI 7159

To appear in: *Journal of Structural Biology*

Received Date: 13 September 2017
Revised Date: 26 January 2018
Accepted Date: 30 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

January 25, 2018

**Comparison of 3D cellular imaging techniques based on scanned electron probes:
serial block face SEM vs. axial bright-field STEM tomography**
