This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Platelet-Activating Antibodies are Detectable at the Earliest Onset of Heparin-Induced Thrombocytopenia, with Implications for the Operating Characteristics of the Serotonin-Release Assay

Theodore E. Warkentin, MD; Donald M. Arnold, MD; John G. Kelton MD; Jo-Ann I. Sheppard, BS; James W. Smith, BS; and Ishac Nazy, PhD

AFFILIATIONS: From the Department of Pathology and Molecular Medicine (Dr Warkentin and Ms Sheppard) and the Department of Medicine (Drs Warkentin, Nazy, Arnold, and Kelton, and Mr Smith), the McMaster Centre for Transfusion Research (Drs Warkentin, Nazy, Arnold, and Kelton), Michael G. DeGroote School of Medicine, McMaster University, and Canadian Blood Services (Dr Arnold), Hamilton, Ontario, Canada.

CORRESPONDENCE TO: Theodore (Ted) E. Warkentin, MD, Room 1-270B, Hamilton Regional Laboratory Medicine Program, Hamilton Health Sciences (Hamilton General Hospital), 237 Barton St. E., Hamilton, Ontario, Canada

RUNNING HEAD: Platelet-activating antibodies at onset of HIT

Word count (abstract) = 247 (limit, 250, structured); text = 2499 (limit, 2500)
