Prevalence and clinical significance of extracardiac findings in cardiovascular magnetic resonance

Agne Ulyte, Nomedra Valeviciene, Darius Palionis, Simona Kundrotaite, Algirdas Tamosiunas

PII: S1109-9666(16)30195-6

DOI: [10.1016/j.hjc.2016.09.006](https://doi.org/10.1016/j.hjc.2016.09.006)

Reference: HJC 53

To appear in: *Hellenic Journal of Cardiology*

Received Date: 11 May 2015

Accepted Date: 1 June 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Original Research****Prevalence and clinical significance of extracardiac findings  
in cardiovascular magnetic resonance**

Santariskiu Klinikos.*

**Short title:** Extracardiac findings in CMR

**Key words:** incidental findings, magnetic resonance imaging, cardiac imaging  
techniques.

**Short summary:** Incidental extracardiac findings in cardiovascular magnetic  
resonance were reported in 5.3% of scans. A substantial part of extracardiac  
findings was clinically significant, with overall prevalence of 1.3%.
