### **ABSTRACT**

Pulmonary artery aneurysm is rare condition. Different etiologies have been reviewed, but idiopathic lesions without other symptoms are seldom reported.

We report the case of a 73-year-old female with idiopathic main pulmonary artery aneurysm of 54mm. There was no other accompanying abnormality.

Because the patient was old, had no severe symptoms and there were no signs of aneurysmic compression or a shunt, initial considerations of surgical intervention were turned down.

This report highlights a case of conservative management of such affected patients, with regular follow-up.

### **KEYWORDS**

pulmonary artery - aneurysm - conservative management - idiopathic
