## Highlights

- Bevacizumab plus temozolomide as salvage therapy for recurrent glioma was analyzed
- Salvage therapy improved health related quality of life of patients
- Salvage therapy had no negative influence on survival time of patients
- Salvage therapy was effective and safe for recurrent glioma

## Abstract

**Objectives:** Bevacizumab (BEV) plus daily temozolomide (TMZ) as a salvage therapy have been recommended to recurrent glioma. The objective of this retrospective study was to evaluate the effect of the combined regimen on health related quality of life (HRQL) and treatment response in patients with recurrent glioma.
