Title: Elevated glycated hemoglobin level and hyperglycemia after aneurysmal subarachnoid hemorrhage

Authors: Kerim Beseoglu, Hans-Jakob Steiger

PII: S0303-8467(17)30304-9

DOI: <https://doi.org/10.1016/j.clineuro.2017.10.037>

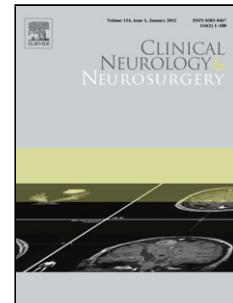

Reference: CLINEU 4822

To appear in: *Clinical Neurology and Neurosurgery*

Received date: 23-8-2017

Revised date: 17-10-2017

Accepted date: 29-10-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Elevated glycated hemoglobin level and hyperglycemia after aneurysmal subarachnoid hemorrhage

Highlights

- Elevated blood glucose correlates with poor outcome in subarachnoid hemorrhage
- Initial hyperglycemia correlates with poor neurological condition
- A pre-existing hyperglycemic metabolism does not contribute to poor outcome
- Elevated HbA1c does not increase risk for delayed cerebral ischemia
