This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Neurophysiological correlates of word processing deficits in isolated reading and isolated spelling disorders

Sarolta Bakos^{a*}, Karin Landerl^b, Jürgen Bartling^a, Gerd Schulte-Körne^a and Kristina Moll^a

^aDepartment of Child and Adolescent Psychiatry and Psychotherapy, University Hospital Munich, Pettenkoferstr. 8a, 80336 Munich, Germany

^bInstitute of Psychology, University of Graz, Universitätsplatz 2/DG 8010 Graz, Austria

Highlights

- Orthographic processing was assessed with EEG in isolated reading and isolated spelling disorders.
- Reading and spelling deficits are associated with different neurophysiological deficit profiles.
- In spelling disorders, neurophysiological word processing is moderated by item specific knowledge.
