Contextual interference enhances motor learning through increased resting brain connectivity during memory consolidation

Chien-Ho (Janice) Lin, Ho-Ching Yang, Barbara J. Knowlton, Allan D. Wu, Marco Iacoboni, Yu-Ling Ye, Shin-Leh Huang, Ming-Chang Chiang

PII: S1053-8119(18)30588-3

DOI: [10.1016/j.neuroimage.2018.06.081](https://doi.org/10.1016/j.neuroimage.2018.06.081)

Reference: YNIMG 15087

To appear in: *NeuroImage*

Received Date: 18 April 2018

Revised Date: 11 June 2018

Accepted Date: 28 June 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Increasing contextual interference (CI) in practice enhances resting brain connectivity and benefits learning
