This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Brain network segregation and integration during an epoch-related
working memory fMRI experiment.

Peter Fransson^{1,*}, Björn C. Schiffler¹, William Hedley Thompson¹

E-mail: Peter.Fransson@ki.se

Keywords: time-varying brain connectivity, fMRI, working memory, brain networks,
integration, segregation, temporal strength

Short title: Working memory and brain subnetwork segregation.

Number of pages: 55

Number of Figures: 6

Number of supplementary figures and tables: 11
