

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

# Perceived freedom of choice is associated with neural encoding of option availability

## Disclosure

This study was supported by the Australian Research Council (ARC) Science of Learning Research Centre (SRI120102313) and the University of Queensland. S.B. was supported by an ARC DECRA (DE140100350). The funders had no role in study design, data collection and analysis, decision to publish, or preparation of the manuscript.

## Acknowledgments

The authors are grateful to their sources of funding, colleagues in Cunnington Lab, Aiman Al Najjar and Nicole Atcheson for MRI support, and Dr David Lloyd for helpful advice in programming the experimental task.
