This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Repairing the brain with physical exercise: Cortical thickness and brain volume increases in long-term pediatric brain tumor survivors in response to a structured exercise intervention

Authors:

Kamila U. Szulc¹, Brian W. Timmons², Eric Bouffet^{3,4}, Suzanne Laughlin⁵, Cynthia B. de Medeiros¹, Jovanka Skocic¹, Jason P. Lerch^{1,6,7} & Donald J. Mabbott^{1,8*}

Running title: Physical exercise increases cortical thickness and white matter volume in pediatric brain tumor survivors.

Highlights

Abbreviations

Keywords: brain recovery, cranial radiation, cortical thickness, exercise, neuroplasticity, pediatric brain tumor
