We read with great interest the clinicopathological conference published by Dairot et al. entitled “*Submucosal nodule in buccal mucosa*”. We reviewed the virtual slides. Histologically, the tumor shows a cribriform pattern with capsular invasion and extra-capsular invasion, the latter is evident in the virtual slides, but not in the published pictures. Basal Cell Adenoma (BCA) of the minor salivary glands is a rare, and we were able to find a single article² describing capsular invasion. Wilson and Robinson (2014)³ have reported that morphologic observation of local tissue invasion is the best
