Abstract

Health care providers should be comfortable with normal as well as pathologic findings in the lips as the lips are highly visible and may display symptoms of local as well as systemic inflammatory, allergic, irritant and neoplastic alterations. Fortunately, the lips are easily accessible. The evaluation should include a careful history and physical examination including visual inspection as well as palpation of the lips and an examination of associated cervical, submandibular and submental nodes. Pathologic and microscopic studies, as well as a review of medications, allergies and habits may further highlight possible etiologies. Many lip conditions, including premalignant changes are
