**Abstract**

**Background:** Family history of cancers at different sites except for colorectum has not been evaluated as a risk factor for colorectal neoplasia (CRN).

**Aims:** To investigate CRN risk according to family history of cancers at 12 different sites, including stomach and colorectum.

**Methods:** A cross-sectional study was performed on 139,497 asymptomatic Koreans who underwent colonoscopy as part of a health check-up.
