This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Esophageal Mucosal Impedance Patterns Discriminate Patients With Eosinophilic Esophagitis From Patients With GERD

Yash Choksi MD¹

(Conduct of data analysis and manuscript)

Pooja Lal MBBS¹

(Conduct of data analysis and manuscript)

James C. Slaughter DrPH²

(Study design, conduct of data analysis, and manuscript)

Rohit Sharda MD¹

(Patient, technical, and material support)

Jacob Parnell MD¹

(Patient, technical, and material support)

Tina Higginbotham MPA¹

(Conduct of data analysis; patient, technical, and material support)

Michael F. Vaezi MD, PhD, MSc¹

(Study concept, design, and manuscript)

Division of Gastroenterology, Hepatology and Nutrition¹

Department of Biostatistics, Vanderbilt University School of Medicine, Nashville, TN²

Vanderbilt Medical Center, Nashville, TN, USA

Conflict of interest: Vanderbilt University and Diversatek Healthcare Inc. (Denver, CO, USA) jointly hold a patent on the mucosal impedance (MI) concept and device. This was disclosed to patients. Dr. Vaezi (MV) has had research funding from Diversatek Healthcare in the conduct of studies with mucosal impedance. Diversatek Healthcare had no influence on the study design, conduct, analysis or the final manuscript. There are no financial relationships between any of the other authors and Diversatek Healthcare Inc. All other authors (YC, PL, JS, RS, TH) have no conflicts of interest.
