Heavy Consumption of Alcohol is Not Associated With Worse Outcomes in Patients With Idiosyncratic Drug-induced Liver Injury Compared to Non-Drinkers

Lara Dakhoul, MD, Marwan Ghabril, MD, Jiezhun Gu, PhD, Victor Navarro, MD, Naga Chalasani, MD, Jose Serrano, MD

PII: S1542-3565(17)31534-3  
DOI: [10.1016/j.cgh.2017.12.036](https://doi.org/10.1016/j.cgh.2017.12.036)  
Reference: YJCGH 55620

To appear in: *Clinical Gastroenterology and Hepatology*  
Accepted Date: 21 December 2017

Please cite this article as: Dakhoul L, Ghabril M, Gu J, Navarro V, Chalasani N, Serrano J, for the United States Drug Induced Liver Injury Network, Heavy Consumption of Alcohol is Not Associated With Worse Outcomes in Patients With Idiosyncratic Drug-induced Liver Injury Compared to Non-Drinkers, *Clinical Gastroenterology and Hepatology* (2018), doi: 10.1016/j.cgh.2017.12.036.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Heavy Consumption of Alcohol is Not Associated With Worse Outcomes in Patients With Idiosyncratic Drug-induced Liver Injury Compared to Non-Drinkers

**Short title:** DILI in alcoholics

**Key Words:** Drug Induced Liver Injury; Drug Induced Liver Injury Network; Significant alcohol consumption; RUCAM; Chronic DILI

### Abbreviations:

ALK P Alkaline phosphatase  
ALT Alanine aminotransferase  
AST Aspartate aminotransferase  
DILI Drug induced liver injury  
DILIN Drug induced liver injury network  
INR International normalized ratio  
ULN Upper limit of normal
