**Short title:** MRI-PDFF predicts fibrosis progression

**Word count:** abstract 189, main text and figure legend 986 words max (1000), tables 1, figures 1, 4 supplemental documents

**Guarantor(s) of the article:** Rohit Loomba

**Grant support:** The study was conducted at the Clinical and Translational Research Institute, University of California at San Diego. RL is supported in part by the American Gastroenterological Association (AGA) Foundation - Sucampo – ASP Designated Research Award in Geriatric Gastroenterology and by a T. Franklin Williams Scholarship Award; Funding provided by: Atlantic Philanthropies, Inc, the John A. Hartford Foundation, OM, the Association of Specialty Professors, and the American Gastroenterological Association and grant K23-DK090303. CS and RL serve as co-PIs on the grant R01-DK106419. CP is supported by NIH TL1 training grant TL1TR00098. Dr. Ajmera is supported by the Alan Hofmann Clinical and Translational Research Award from the AASLD Foundation. The content is solely the responsibility of the authors and does not necessarily represent the official views of the NIH. CC is supported by grants from the Société Francophone du Diabète (SFD), the Philippe Foundation and Monahan Foundation under the Fulbright program
