This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Lay Summary**

Hepatitis C virus (HCV) infections often persist lifelong. We have identified a novel viral immune evasion mechanism based on the secretion of viral double stranded RNA from infected cells in extracellular vesicles. Thereby the virus is less efficiently recognized, helping to maintain persistence.
