Visualization of the therapeutic efficacy of a gene correction approach in Wilson's disease by Laser-ablation inductively coupled mass spectrometry

Daniel Moreno, Oihana Murillo, Cristina Gazquez, Ruben Hernandez-Alcoceba, Ricarda Uerlings, Gloria Gonzalez-Aseginolaza, Ralf Weiskirchen

PII: S0168-8278(18)30003-5
DOI: <https://doi.org/10.1016/j.jhep.2017.12.022>
Reference: JHEPAT 6810

To appear in: *Journal of Hepatology*

Received Date: 1 December 2017
Revised Date: 23 December 2017
Accepted Date: 26 December 2017

Please cite this article as: Moreno, D., Murillo, O., Gazquez, C., Hernandez-Alcoceba, R., Uerlings, R., Gonzalez-Aseginolaza, G., Weiskirchen, R., Visualization of the therapeutic efficacy of a gene correction approach in Wilson's disease by Laser-ablation inductively coupled mass spectrometry, *Journal of Hepatology* (2018), doi: <https://doi.org/10.1016/j.jhep.2017.12.022>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Letter to the Editor -

Visualization of the therapeutic efficacy of a gene correction approach in Wilson's disease by Laser-ablation inductively coupled mass spectrometry

Daniel Moreno^{1,2}, Oihana Murillo^{1,2}, Cristina Gazquez^{1,2}, Ruben Hernandez-Alcoceba^{1,2}, Ricarda Uerlings⁴, Gloria Gonzalez-Aseguinolaza^{1,2,3*}, Ralf Weiskirchen^{4*}

¹ Gene Therapy and Regulation of Gene Expression Program, CIMA, Foundation for Applied Medical Research, University of Navarra, Pamplona, Spain

² Instituto de Investigacion Sanitaria de Navarra (IDISNA), Pamplona, Spain

³ Vivet-Therapeutics, Pamplona, Spain

⁴ Institute of Molecular Pathobiochemistry, Experimental Gene Therapy and Clinical Chemistry (IFMPEGKC), RWTH University Hospital Aachen, D-52074 Aachen, Germany

Word count: 822 words, 1 figure, 10 References

Key words: Wilson's disease, gene therapy, ATP7B, metal, copper.

Conflict of interest: Dr. Gonzalez-Aseguinolaza is affiliated with Vivet-Therapeutics, a company focused on optimizing gene therapies for various diseases. All other authors have nothing to declare.
