ABSTRACT**Background**

We present our experience with same day discharge (without an overnight stay) after laparoscopic sleeve gastrectomy (SG) on 821 consecutive patients from 2011-2015. This is the largest series of patients undergoing ambulatory surgery for such a procedure published to date.

Objectives

Review our outcomes from ambulatory SG over 52 months to determine if SG can be safely performed in the ambulatory setting.

Setting

Ambulatory surgery center.
