This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Benefit of Feeding Tube Placement for Refractory Malnutrition After Bariatric Surgery**

Eric J Charles MD, J Hunter Mehaffey MD, Robert B Hawkins MD, Dana Safavian MSc,  
Bruce D Schirmer MD, Peter T Hallowell MD

Department of Surgery, University of Virginia Health System, Charlottesville, VA

This work was presented at Obesity Week 2016 in New Orleans, LA.

This work was supported by the National Heart, Lung and Blood Institute (grants T32 HL007849 and UM1 HL088925). The authors had full control of the design of the study, methods used, results, data analysis and production of the written manuscript. None of the authors report any financial or personal conflicts of interest.
