Running title: Predicting outcomes after bariatric surgery

Acknowledgements: Supported, in part, by a research grant from the Lourdes Foundation, Camden, NJ

Presented, in part, at Obesity Week, November 11-16, 2013, Atlanta, GA

ABSTRACT

Background: No method predicts, pre-operatively, post-operative bariatric surgery outcomes in individual patients. Decisions for/against surgery and operation choice remain subjective. Only 1% of qualifying patients embrace bariatric surgery.
