Abstract

We describe a case of carbapenemase-harbouring *Proteus mirabilis* together with detection of NDM-5 in Austria accompanied by other bacterial strains with a wide range of beta-lactamases including OXA-181 and VEB-6. Isolates were obtained from a subphrenic abscess from one patient who was previously treated with broad-spectrum antibiotics in Bangladesh.

Key words: antimicrobial resistance; OXA-181; KPC-2; *Escherichia coli*; *Klebsiella pneumoniae*; carbapenem-resistant Enterobacteriaceae

Acknowledgements: We would like to thank the laboratory team of bacteriology at the Institute of Hygiene, Microbiology and Environmental Medicine.
