## Highlights

- AmbuFlex is a web-based tool to collect PRO from home prior to clinic visits
- It provided a method to systematically collect and document a wide range of symptoms
- It identified new symptoms that appeared to have been otherwise overlooked
- We found a substantial variation in health care needs for HIV infected individuals
- PRO has potential to increase quality of care and facilitate resource optimisation

## Abstract:

**Introduction:** Use of Patient-Reported Outcome (PRO) in outpatient care holds promise as a tool to enhance quality of care. The management of chronic HIV-infection is multidimensional, and clinical assessment includes broad screening to identify complications. With growing constraints on
