Joint loading and proximal tibia subchondral trabecular bone microarchitecture differ with walking gait patterns in end-stage knee osteoarthritis

Bryant C. Roberts, Lucian B. Solomon, Graham Mercer, Karen J. Reynolds, Dominic Thewlis, Egon Perilli

PII: S1063-4584(17)31045-2

DOI: [10.1016/j.joca.2017.06.001](https://doi.org/10.1016/j.joca.2017.06.001)

Reference: YJOCA 4029

To appear in: *Osteoarthritis and Cartilage*

Received Date: 12 December 2016

Revised Date: 30 April 2017

Accepted Date: 9 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
