This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Revision 2: Clean copy

Molecular characterisation of *bla*OXA48 carbapenemase, extended spectrum beta -lactamase (ESBL) and Shiga toxin producing *Escherichia coli* isolated from farm piglets of India

K.R.Nirupama¹, O.R.Vinodh Kumar^{1*}, B.S.Pruthvishree¹, D.K.Sinha¹, M. Senthil Murugan¹, Narayanan Krishnaswamy² and B.R.Singh¹

Highlights

- First report of *bla*OXA48 carrying *E. coli* in the piglets of India.
- The ESBL producing *E. coli* isolates also harbored antimicrobial resistant genes like *qnrA*, *qnrB*, *qnrS*, *tetA*, *tetB* and *sul1*.
