Keywords: Anti-cholinergic, epidemiology, bone mineral density, falls, fracture, women, middle age

Word count: 2855

Table 1: Participant characteristics by anti-cholinergic burden score in 3,883 middle-aged women of APOSS at second visit.

Table 2: Results of logistic regression analysis examining the association between anti-cholinergic burden (reference category = 0) a history of falls over the previous 12 months.

Table 3: Results of logistic regression analyses examining association between anti-cholinergic burden (reference category = 0) and hip and spine bone mineral density.

Supplementary Table: Anti-cholinergic burden scoring table.
