This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Running Head: Reducing fatigability during NMES

Title: Utilising physiological principles of motor unit recruitment to reduce fatigability of electrically-evoked contractions: A narrative review

Authors: Trevor S Barss, PhD¹, Emily N Ainsley, BSc^{1,2}, Francisca C Claveria-Gonzalez, BSc^{1,3}, M John Luu, BSc^{1,2}, Dylan J Miller, BSc¹, Matheus J Wiest, PhD^{1,4}, David F Collins, PhD^{1,2}

Affiliations:

¹Human Neurophysiology Laboratory, Faculty of Physical Education and Recreation, University of Alberta, Edmonton, Canada.

²Neuroscience and Mental Health Institute, University of Alberta, Edmonton, Alberta, Canada.

³Faculty of Rehabilitation Medicine, University of Alberta, Edmonton, Alberta, Canada.

⁴Biomechanics Laboratory, Department of Physical Education, Federal University of Santa Catarina, Florianópolis, Brazil.

Funding: Support for this research was provided (to David F. Collins) by the Craig H. Nielsen Foundation (NSRG 309600). Support was also funded by the Natural Sciences and Engineering Research Council of Canada (to Dylan J. Miller; USRA) and Campus Alberta Neuroscience (to Trevor S. Barss; Post-Doctoral Fellowship). Funding sources had no involvement in study design, nor in data collection, analyses, and/or interpretation.
