This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Clinical Quadriceps Activation Battery

Title: Performance on a clinical quadriceps activation battery is related to a laboratory measure of activation and recovery after total knee arthroplasty

Authors: Michael Bade PT, PhD^a, Tamara Struessel PT, DPT^a, Roger Paxton, PhD^a, Joshua Winters, PhD^b, Carol Baym PhD^a, Jennifer Stevens-Lapsley, PT, PhD^a

Affiliations:

From the ^aDepartment of Physical Medicine and Rehabilitation, School of Medicine, University of Colorado Anschutz Medical Campus, Aurora, CO; ^b Sports Medicine Research Institute at Camp Lejeune, University of Kentucky, Lexington, KY

Previous Presentation of the Research:

Lloyd BJ, Bade MJ, Paxton RJ, Stackhouse S, Dayton MR, Eckhoff D, Stevens-Lapsley JE. Poor quadriceps activation 72 hours after total knee replacement is related to poor functional performance at 1 month. Abstracted presented at the American Physical Therapy Association Combined Sections Meeting Feb, 2016.

Author Disclosures:

Conflict of interest: None of the authors have any conflicts of interest to report

Funding: NIH R01-HD065900, NIH/NCATS UL1-TR001082, NIH T32 AG00279, and the Foundation for Physical Therapy Promotion of Doctoral Studies (PODS) I and II Scholarships
