Title: CONTRIBUTION OF PHOTODYNAMIC THERAPY  
IN WOUND HEALING: A SYSTEMATIC REVIEW

Authors: Vanessa Nesi-Reis, Daniele Stéfanie Sara Lopes  
Lera-Nonose, Jully Oyama, Marielle Priscila Paula  
Silva-Lalucci, Izabel Galhardo Demarchi, Sandra Mara Alessi  
Aristides, Jorge Juarez Vieira Teixeira, Thaís Gomes  
Verzignassi Silveira, Maria Valdrinez Campana Lonardoni

PII: S1572-1000(17)30423-4  
DOI: <https://doi.org/10.1016/j.pdpdt.2017.12.015>  
Reference: PDPDT 1090

To appear in: *Photodiagnosis and Photodynamic Therapy*

Received date: 25-8-2017  
Revised date: 12-12-2017  
Accepted date: 26-12-2017

## Highlights

### What is already known on this topic?

- Photodynamic therapy (PDT) has been studied in tissue repair and in the treatment of uninfected or infected (due to their inactivation potential of microorganisms) skin wounds.
- Reviews addressing PDT in wound healing in humans are sparse.

### What this study adds?

- Availability of a large number of photosensitizing agents and light sources for PDT.
