Keywords: Pyelolithotomy; Partial nephrectomy; Robotic surgery; Stones; endoscopy; ureteral surgery

Introduction and Objectives

With the evolution of robot-assisted surgery in the urology field, this technology is being applied to treat many genitourinary conditions¹. Despite the fact that incidence of urolithiasis and renal neoplasm are rising, encountering both entities in a single kidney is noteworthy. Our video exhibits the concurrent management of a renal calculus and an ipsilateral renal neoplasm using a robotic platform.
