This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The Role of Human Acellular Dermis in Preventing Fistulas after Bladder Neck Transection in the Exstrophy-Epispadias Complex

Karl S. Benz B.A.¹, John Jayman B.A.¹, Mahir Maruf M.D.¹, Gregory Joice M.D.¹, Matthew Kasprenski M.D.¹, Nikolai Sopko M.D.¹, Heather Di Carlo M.D.¹, John Gearhart M.D.¹

1. Robert D. Jeffs Division of Pediatric Urology, James Buchanan Brady Urological Institutions, Johns Hopkins Hospital, Baltimore, MD, USA

Disclosures: None

Abstract word count: 247

Manuscript word count: 2276

Key words: Bladder neck transection; Exstrophy-epispadias-complex; Human acellular dermis; Outcomes; Fistulization; Tissue interposition

Selected Classifications: Bladder, Fistula, Pediatric, Diversion, Exstrophy

Twitter summary: Human acellular dermis interposition as an effective adjunct to bladder neck transection in exstrophy-epispadias-complex
