Load transfer and periprosthetic fractures after total hip arthroplasty: Comparison of periprosthetic fractures of femora implanted with cementless distal-load or proximal-load femoral components and measurement of the femoral strain at the time of implantation

E. Schwarz, G. Reinisch, A. Brandauer, S. Aharinejad, W. Scharf, K. Trieb

PII: S0268-0033(18)30234-1  
DOI: [doi:10.1016/j.clinbiomech.2018.03.010](https://doi.org/10.1016/j.clinbiomech.2018.03.010)  
Reference: JCLB 4496  
To appear in: *Clinical Biomechanics*  
Received date: 18 July 2017  
Accepted date: 16 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Load transfer and periprosthetic fractures after total hip arthroplasty  
Comparison of periprosthetic fractures of femora implanted with cementless distal-load or proximal-load femoral components and measurement of the femoral strain at the time of implantation**
