Title: Comparison of Three-Dimensional Multi-segmental Foot Models Used in Clinical Gait Laboratories

Please cite this article as: Nicholson K, Church C, Takata C, Niiler T, Chen BP-Jung, Lennon N, Sees JP, Henley J, Miller F, Comparison of Three-Dimensional Multisegmental Foot Models Used in Clinical Gait Laboratories, *Gait and Posture* (2010), https://doi.org/10.1016/j.gaitpost.2018.05.013

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Analyzed five three-dimensional multi-segmented foot-models (3DMSFMs)
- Found repeatability and kinematics similarities and differences between each model
- All models showed moderate repeatability
- duPont and Oxford models show most similar kinematic values
- Use of model specific normative data recommended
