Patient Factors Associated with Prolonged Post-operative Opioid Use After Total Knee Arthroplasty

Robert S. Namba, MD, Anshuman Singh, MD, Elizabeth W. Paxton, MA, Maria C.S. Inacio, Ph.D

PII: S0883-5403(18)30347-4

DOI: [10.1016/j.arth.2018.03.068](https://doi.org/10.1016/j.arth.2018.03.068)

Reference: YARTH 56562

To appear in: *The Journal of Arthroplasty*

Received Date: 7 February 2018

Revised Date: 23 March 2018

Accepted Date: 27 March 2018

Please cite this article as: Namba RS, Singh A, Paxton EW, Inacio MCS, Patient Factors Associated with Prolonged Post-operative Opioid Use After Total Knee Arthroplasty, *The Journal of Arthroplasty* (2018), doi: 10.1016/j.arth.2018.03.068.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Patient Factors Associated with Prolonged Post-operative Opioid Use After Total Knee Arthroplasty**

**Running Title: Patient Factors Associated with Prolonged Post-operative Opioid Use**
