Abstract:

Background: Pyomyositis PM is defined as a primary pyogenic infection of the striated skeletal muscle; although it has many dystrophic musculoskeletal complications, it is always misdiagnosed by many orthopedic surgeons.

Hypothesis: PM is rare in temperate climates and usually considered to be a tropical disease, until recent times, after globalization, it is possible to occur in the subtropical climate as in our country.

Material and Methods: In the present series, the results of 15 children patients with primary pyomyositis have been reviewed. In five out of them, conservative treatment protocol alone which has been by intravenous and oral antibiotics therapy was effective. The remaining ten
