Title: Low-dose BMP-2 is sufficient to enhance the bone formation induced by an injectable, PLGA-fiber reinforced, brushite-forming cement in a sheep defect model of lumbar osteopenia

Author: Francesca Gunnella, Elke Kunisch, Matthias Bungartz, Stefan Maenz, Victoria Horbert, Long Xin, Joerg Mika, Juliane Borowski, Sabine Bischoff, Harald Schubert, Peter Hortschansky, Andre Sachse, Bernhard Illerhaus, Jens Günster, Jörg Bossert, Klaus D. Jandt, Frank Plöger, Raimund W. Kinne, Olaf Brinkmann

PII: S1529-9430(17)30267-X  
DOI: <http://dx.doi.org/doi: 10.1016/j.spinee.2017.06.005>  
Reference: SPINEE 57345

To appear in: *The Spine Journal*

Received date: 7-3-2017  
Revised date: 23-5-2017  
Accepted date: 8-6-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
