This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Table 1: Causes of Progressive Nasal Destruction in Childhood

Category	Diagnosis
Autoimmune/ Inflammatory	Antiphospholipid antibody syndrome
	Eosinophilic granulomatosis with polyangiitis (Wegener's granulomatosis and Churg-Strauss)
	Polyarteritis nodosa
	Relapsing polychondritis
	Sarcoidosis
Genetic	Congenital deformity
	Ectodermal dysplasia
Immunodeficiency	Chronic granulomatous disease
	Common variable immunodeficiency
	Severe combined immunodeficiency
	X-linked lymphoproliferative syndrome
Infectious	Botryomycosis (<i>Staphylococcus aureus</i> and occasionally <i>Pseudomonas</i> spp., <i>Escherichia coli</i> , <i>Proteus</i> spp., and <i>Streptococcus</i> spp)
	Congenital syphilis
	Cutaneous leishmaniasis
	Mucormycosis
	Mycobacterial infection
	Ozena (<i>Klebsiella pneumoniae ozaenae</i>)
	Subperiosteal abscess of the frontal bone with associated osteomyelitis (Pott's puffy tumor)
Oncologic	Cutaneous lymphoma
	Extra-nodal natural killer/ T-cell lymphoma
Other	Child Abuse
	Intranasal use of sympathomimetic nasal spray, drops, illegal drugs
	Intranasal abuse of acetaminophen drops
