This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

TITLE: Diagnostic Significance of Intratumoral CD8+ Tumor Infiltrating Lymphocytes in Medullary Carcinoma.

Authors: Fumie Igari^{1§}, Eiichi Sato^{2§*}, Yoshiya Horimoto¹, Yuka Takahashi¹, Tatsuya Isomura^{3,4}, Atsushi Arakawa⁵, Shigehisa Kitano⁶, and Mitsue Saito¹

Affiliations:

1 Department of Breast Oncology, 5 Department of Pathology, Juntendo University School of Medicine, Tokyo, Japan

2 Department of Pathology (Medical Research Center), 3 Division of Clinical Research Consultation, Institute of Medical Science, Tokyo Medical University, Tokyo, Japan

4 Clinical Study Support, Inc., Nagoya, Japan

6 Department of Experimental Therapeutics, Exploratory Oncology Research and Clinical Trial Center, National Cancer Center, Tokyo, Japan

§ F. I. and E. S. contributed equally to this study

Running title: Intratumoral CD8+ TIL in Medullary Breast Cancer

Key words: Multiplex fluorescent labeling, cancer immunology, breast cancer, immunohistochemistry, tumor infiltrating lymphocytes

Competing interests: The authors have no potential conflicts of interest to declare.

Financial support:

Grant support was obtained from the Japan Agency for Medical Research and Development (AMED), Project for Development of Innovative Research on Cancer Therapeutics (Eiichi Sato), and JSPS KAKENHI Grant Number 26460655 (Atsushi Arakawais).
