Keywords: Social Determinants of Health; Pregnancy; Infancy; Child Obesity; Prevention.

Abstract: none; **Word Count:** 1000

Running Title: Prenatal Material Hardships and Child Obesity Prevention

Acknowledgements/Funding:

This work was supported by the National Institute of Food and Agriculture, US Department of Agriculture, under award number 2011-68001-30207. Funding was also provided by the National Institutes of Health/National Institute of Child Health and Human Development (NIH/NICHHD) through a K23 Mentored Patient-Oriented Research Career Development Award (K23HD081077; PI Gross).

Conflicts of Interest: The authors have no conflicts of interest to disclose.

What's new: Prenatal social determinants of health are associated with potential key mediators related to child obesity-promoting behaviors. Innovative primary care-based interventions that combine primary and secondary/tertiary prevention may be needed to address the heterogeneity of risk that exists in low-income communities.
