This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

SUMMARY

This video provides a case report of a 3 year old girl with epispadia and the highlights of the surgery. A cystoscopic guided bladder neck plication was performed to achieve continence.

Key points include

1. Skin incision planning
2. Cutaneous flap liberation to create a new urethra
3. Complete bladder neck release to allow a controlled plication
4. Use of cystoscopy to achieve the ideal bladder neck closure.
5. Bladder neck manipulation to achieve continence
