

# Accepted Manuscript

Anhedonia following early-life adversity involves aberrant interaction of reward and anxiety circuits and is reversed by partial silencing of amygdala corticotropin-releasing hormone gene

Jessica L. Bolton, Jenny Molet, Limor Regev, Yuncai Chen, Neggy Rismanchi, Elizabeth Haddad, Derek Z. Yang, Andre Obenaus, Tallie Z. Baram

PII: S0006-3223(17)31942-X

DOI: [10.1016/j.biopsych.2017.08.023](https://doi.org/10.1016/j.biopsych.2017.08.023)

Reference: BPS 13310

To appear in: *Biological Psychiatry*

Received Date: 4 January 2017

Revised Date: 29 August 2017

Accepted Date: 29 August 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Title Page**

**Keywords:** anhedonia, brain circuits, CRF, CRH, shRNA, diffusion tensor imaging, early-life stress, gene silencing, amygdala, reward circuit

**Word Count for Abstract:** 250

**Word Count for Main Body:** 3,995

**Number of Figures:** 7

**Number of Tables:** 0

**Number of Supplemental Information:** 1 document with 6 figures, 2 tables

**Short Title:** Amygdala CRF contributes to anhedonia
