This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Trans-saccadic perception deficits in schizophrenia reflect the improper internal monitoring of eye movement rather than abnormal sensory processing

Sonia Bansal^{1,4,a}, Laurence C. Jayet Bray², Barbara L. Schwartz^{4,5} and Wilsaan M. Joiner^{1,2,3}

Main Text Word count: 3996

Abstract word count: 248

Number of tables: 2

Number of figures: 4

Supplementary Material: 1 file-6 figures, 3 tables

Keywords: Schizophrenia, saccade, corollary discharge, positive symptoms, visual perception, sense of agency

Short Title: Improper monitoring of eye movements in Schizophrenia
