This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Costs related to adolescent depression have only been calculated based on rough estimations.
- Clinically referred adolescents cost the Dutch society annually almost €38 million.
- Using a more recent, international prevalence rate, the costs in the Netherlands augmented to €59 million a year.
- The magnitude of costs warrants effective prevention and intervention programs but this should be examined with cost-effectiveness studies.
