This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

JAD_2018_561_R1

Highlights:

- Frequency of psychopathologies are different in men and women with severe obesity
- Most patients seeking bariatric surgery present concurrent psychiatric disorders
- The profiles were: oligosymptomatic, bipolar comorbidities, and anxiety/depression
- Clustering of psychiatric disorders may suggest different therapeutics and outcomes
