This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Associations between socioeconomic status markers and depression were assessed.
- The mediating role of behavioural, psychosocial and material factors was investigated.
- A representative sample of older adults from Finland, Poland and Spain was used.
- Poor income and low education independently increased the likelihood of depression.
- Material and behavioural factors were significant mediators in these associations.
