This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Global cognitive functioning, learning and memory and executive functioning are positively associated with global social functioning
- Global social functioning as judged by the clinician is independent of self-reported social functioning
- Attention and verbal fluency are not associated with global social functioning
